

Mirrors

Radius

Radius is a simple mirror with an irregular shape. Essential yet different, with a distinct character, it fits into any room of the house.

IRREGULAR MIRROR: HOW IT COMES ABOUT

The in-house R&D Dallagnese design team designed Radius by playing with a regular polygon that they made irregular by beveling the corners, each time with a different radius. The cutting of the mirror is joined only by grinding the edge to a polished edge and, upon request, adding a perimeter LED light.
